

FRUIT & VEG

Data-Driven Performance Initiative

Findings, Recommendations & Tools Built

Foodland Wudinna | Wudinna SA

Presented by: Fábio

MANAGEMENT BRIEFING

March 2026

What We Will Cover Today

01

The Problem

Why this analysis was needed

02

Key Findings

What the data tells us

03

Financial Impact

Quantified losses and projections

04

Tools Built

Notebook, waste log, KPI report

05

Recommendations

Prioritised actions with targets

06

What We Need

Support requested from management

Something is going wrong in the Fruit & Veg department

Without visibility into daily sales patterns, waste events, and markdown trends, **we are ordering by gut feel — and the data shows it is costing us.**

- Revenue per trading day is declining year-on-year
- Waste markdown events have surged to 8× prior-year rate
- No formal waste log — losses are invisible until month-end
- No demand forecast — ordering is based on memory and experience
- Open-ring scanning hides what products are actually being sold

+51.3%

YoY increase in
avoidable GP losses

×8

Increase in waste
events per day (2025→2026)

Key Findings: Department Snapshot

JAN-MAR

\$2,448

Revenue / Day

-6.4%

vs 2025 same period

37.8%

Gross Profit %

+0.5pp

vs 2025 same period

626→611

Lines Sold / Day

-2.4%

vs 2025 same period

\$15.89

Avoidable GP Loss / Day

+51.3%

vs 2025 same period

8.24

Waste Events / Day

+505%

vs 2025 same period

\$12.05

Specials GP Cost / Day

-21.2%

vs 2025 same period

Finding 1 — Waste is the #1 Urgent Problem

REDUCED FV Lines per Trading Day

What this means:

- ! March 2026 rate (9.44/day) is 8× the March 2025 rate (1.08/day)
- ! REDUCED FV GP loss has jumped from \$1.09/day → \$5.12/day (+370%)
- ? Product range expansion alone cannot explain an 8× increase
- Root cause: over-ordering and insufficient daily stock rotation
- ✓ Solvable with better ordering controls — no new software required

Finding 2 — Separating Promotions from Waste

BEFORE separation

**All low-GP% events
labelled "Markdown"**

100% — All flagged as Markdown

Problem: Planned promotional discounts were being counted as avoidable losses — inflating the markdown number by 58.7%.

AFTER cycle classification

**Wednesday Specials
correctly separated**

58.7%
Wed Specials

41.3%
True Markdowns

Specials GP cost/day

2025: \$15.30 → 2026: \$12.05

-21.2%

True Markdown/day

2025: 1.41 → 2026: 2.02

+43%

Key insight: Specials are improving. Unplanned markdowns are rising. These require opposite responses.

Quantified Losses & Projections

Based on Jan-Mar measured data with Seasonal Coverage Multiplier applied to project full year

Loss Category	2025 /day	2026 /day	YoY
REDUCED FV (waste)	\$1.09	\$5.12	+370%
True Markdowns (barcoded)	\$9.29	\$10.27	+10.6%
Negative GP (residual)	\$0.12	\$0.49	+308%
TOTAL	\$10.50	\$15.89	+51.3%

No double-counting; each loss event classified exactly once

Full-Year Projection

at 2026 loss rate (central estimate)

Conservative

\$3,023

(-10% seasonal adj.)

Central

\$3,243

(primary estimate)

Optimistic

\$3,462

(+10% — trend cont.)

~\$3,557 / year

Total addressable annual benefit (GP + labour savings)

Tools Already Built — Ready to Use Today

Executive EDA Notebook

1

Executive_EDA_Report.ipynb

- 12 analysis sections + 61 code cells
- YoY performance, ABC classification, price elasticity
- Special vs. Markdown cycle classification (9.1c)
- Walk-forward forecast validation & seasonal decomp
- Conclusions & prioritised recommendations built in

Waste Recording Log

2

FruitVeg_Waste_Log.xlsx

- Excel workbook — no software needed
- 200-row log with dropdowns (Category, Reason, Unit)
- Auto-calculates Waste Cost and Revenue Lost per row
- Summary sheet: totals by reason and sub-department
- Instructions sheet for staff onboarding

Financial Impact & KPI Report

3

FruitVeg_FinancialImpact_KPI_Report.docx

- 9-section Word document with full methodology
- Measured losses table (no double-counting)
- Conservative / Central / Optimistic projections
- KPI framework: 9 metrics with baselines & targets
- Prioritised action plan with measurement cadence

Recommendations — Prioritised by Impact

P1

Reduce REDUCED FV waste

0–4 weeks

Audit top 5 waste items and cut order quantities 15–20%. Action stock at 2–3 days from expiry — don't wait for same-day clearance.

< 5.0 events/day

P2

Eliminate open-ring scanning

0–4 weeks

Assign a PLU to every item. Retrain cashiers to use exact product codes. Add a register prompt on open-ring key press.

< 0.5 lines/day

P3

Price rollbacks: Margin Trap

1–3 months

Trial price reductions on Green Grapes and Baby Lebanese Cucumbers. Monitor volume response for 4 weeks before making permanent.

Recover 50% GP gap

P4

Structured ordering aid

1–3 months

Use 4-week same-weekday moving average for top 20 items. Maintainable in a spreadsheet updated weekly from the POS export.

Orders $\pm$ 15% of sales

P5

Prophet demand forecast

3–12 months

Build a Prophet model with holiday regressors and Wednesday Special flags. Start with top 10 items and validate before extending.

MAPE < 15%

How We Will Measure Success

All trackable from weekly POS export — no new software

KPI	Baseline (2026)	6-Month	12-Month	Frequency	Status
 REDUCED FV lines/day	8.24	< 5.0	< 3.0	Weekly	Active
 GP Loss/day (avoidable)	\$15.89	<\$12	<\$9.50	Monthly	Active
 True Markdown events/day	2.02	< 1.7	< 1.5	Monthly	Active
 Revenue/day	\$2,448	>\$2,500	>\$2,600	Weekly	Active
 GP %	37.8%	>37.5%	>38.5%	Monthly	Active
 Open ring lines/day	2.1	< 1.0	< 0.5	Weekly	Active
 Waste log entries/week	0	> 3	> 10	Weekly	Active

What We Need to Move Forward

Your endorsement

Sign off on a formal waste reduction initiative. Gives the team mandate to change ordering practices and hold accountability.

15 min / week

Weekly review of REDUCED FV lines/day and open ring count from the POS export. Two numbers, 15 minutes — that's the early warning system.

Staff buy-in support

Brief the team on the waste log and PLU discipline. Requires a 10-minute conversation — we have the materials ready.

Future: forecast model

3–12 month phase: budget conversation for basic forecasting tools once Phase 1 savings are confirmed (target: MAPE < 15%).

Initiative Summary

Problem	Waste events ×8, losses +51% YoY
Data	97 days (2025) + 66 days (2026)
Tools ready	3 deliverables built & validated
Projected loss	\$3,243/year at current rate
Addressable benefit	~\$3,557/year (GP + labour)
Phase 1 cost	\$0 — tools already built
Phase 1 timeline	0–4 weeks for first actions

Thank You

*The analysis is done.
The tools are built.
We just need to start.*
